

Marin Science Seminar presents

Why are there Stars?

with Steven Stahler, Professor of Astronomy, UC-Berkeley

A one-hour multimedia presentation for Marin Middle and High School Students

Wednesday, February 24th, 2010

7:30 – 8:30 pm

Terra Linda High School, Room 207
320 Albion Way, San Rafael, CA 94903

On a clear night, the sky is filled with countless stars. Our Sun is one of them. How do these objects form? In recent decades, astronomers have begun answering this very old question. This progress has occurred despite the fact that the youngest stars are invisible to the eye and even to most telescopes. Along the way, we have learned how planets like the Earth are created as part of the stellar birth process.

Dr. Steven Stahler is an astrophysicist at U. C. Berkeley. He attended graduate school at UC-Berkeley in physics and was a professor at MIT before returning to the Bay Area in 1992.
